
Ferromagnetic random network
(subspace dimension $M = 998$)
$\pm J$ random network
(subspace dimension $M = 788$)
Ring
(subspace dimension $M = 322$)
$\ln(M)$ (upper bound)
$\ln(M) - \ln(3)$ (GOE)
Mean -3 std
Eigenstates
Atypical in S_2 (scar candidates)
Participation entropy S_2
Eigenenergy E/J
$1 - [(E - E_0)/(N\Gamma)]^2$
Multipartite entanglement Q
Atypical in S_{half} at fixed E
Entanglement entropy S_{half}
$r = 0.56$
